

Hyaluronic Acid (HA) is making a difference in the lives of people, horses, and now, dogs and cats!

# HyaFlex

ORAL HYALURONIC ACID (HA)

- Canine hip and joint formula
- Supports healthy joints

# Joint health for your pet

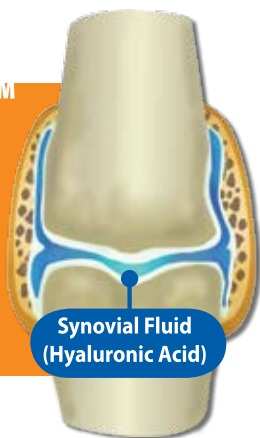

Hyaluronic Acid (HA) is revolutionizing the joint health management for humans, horses, and now your pets. Found naturally in all living organisms, it provides the elastic shock absorbing properties to support healthy joints for your pet.

Unlike the hit-or-miss results of Hyaluronic Acid's early precursors, glucosamine and chondroitin, HyaFlex™ is quickly showing results and earning respect. Proven to maintain proper joint fluid viscosity, HyaFlex™ compensates for your pets depleted ability to produce HA with age by restoring lubrication and healthy movement. HA is a major component of the skin, eyes, and gums and HyaFlex™ is also great for maintaining proper health in those areas as well.

## Benefits of HyaFlex™

*Helps support and maintain*

- joint mobility
- joint flexibility
- joint function
- cartilage function

HyaFlex™ is recommended to support a dog's healthy hip and joint function. Use this chart to determine your dog's daily dosage.

5-30 lbs	31-75 lbs	75+ lbs
1/2 dropper	3/4 dropper	1 full dropper
